

# Allimax LIQUID

## Allimax Liquid (10ml)

Allimax Liquid is made from fresh, raw garlic sourced from Spain. Heads of garlic are specifically selected to ensure that they contain significant enzyme activity (allinase enzyme). Garlic heads are split into cloves, which are left unpeeled and then subjected to crushing, filtration and a temperature controlled extraction process designed to produce pure liquid allicin dissolved in water. No chemical solvents are used.

Allimax Liquid contains 100% yield of pure allicin in a water-base. Safe for infections, eyes, sinuses (with a neti pot), ears (infections, swimmers ear), nebulizers and for pets. Apply directly onto sores or put a couple drops on a band-aid for easy application.

Allimax Liquid can be mixed with cream or lotion to use as a topical. It has also been used in feeding tubes. Mix with shampoo for scalp infections.

AlliMax Liquid can be used for a number of conditions with a anti-bacterial, anti-fungal and anti-viral properties. It has shown to treat a number of pathogens including SIBO, IBS, MRSA, Streptococcus aureus bacteria, assist in helping Lyme disease, common cold, flu, and a number of both viral and bacterial infections.

**Directions:** Use as often as desired or as directed by your health care provider for maximum health benefits. Refrigerate after opening for best results. 8 drops is equivalent to one Allimax capsule. Best if used internally or with capsules when treating certain conditions or using topically.

**Ingredients:** Aqua, allicin liquid. Free of preservatives and additives.

**Warnings:** Discontinue use if irritation occurs.

**Recommended for children or adults  
who do not or cannot take capsules.**

# How To Get The Most From Allimax® Liquid

Allimax Liquid contains 100% standardized alliin from garlic - nature's anti-microbial agent. This means Allimax Liquid can be used to help resolve any condition that has a bacterial, fungal or viral cause.

## Feet and Toe Nails

For fungal nail infections or athlete's foot, apply liquid twice daily to affected area. Allimax Liquid is safe and easy to use. Taking 1 to 3 Allimax capsules daily, in conjunction with using the liquid, speeds healing.

## Legs and Knees

Use Allimax Liquid on cuts, bruises, bites or stings which can become infected. Allimax Liquid may be applied as needed and when required. You can put on a bandage or dressing to apply easily. Allimax Liquid has been used successfully for treating open weeping MRSA infections. Once the liquid has started the healing process and new skin has appeared, it is effective to continue using Allimax cream topically on the wound and stop using Allimax Liquid.

## Trunk

Conditions such as eczema, psoriasis and rosacea may also benefit from using Allimax Liquid. It is estimated up to 95% of simple cases of eczema are infected by a bacterium called *Staphylococcus aureus*. Allimax Liquid has been shown to kill multi drug resistant bacteria including *Staphylococcus aureus*. Children who suffer from viral infections such as molluscum contagiosum can also benefit when using Allimax Liquid.

## Hands and Finger Nails

Fungal infections are very common on finger nails, usually shown by tiny black or white spots which in time may get bigger and if not treated could lead to a split or cracked nail that can eventually be lost. Allimax Liquid applied twice daily over the nail and cuticle surface along with 1 Allimax capsules taken daily can normally resolve this within 12 weeks. It is imperative the protocol be followed throughout the entire new growth process of the nail. If this is not followed, results will be compromised and not be effective.

## Face

Another viral infection that needs immediate treatment is a cold sore caused by herpes simplex virus. Using Allimax Liquid as soon as the lips begin to tingle will quickly prevent the cold sore from worsening and will soon resolve the problem. A mild stinging sensation indicates Allimax Liquid is working.

## Head

Warts are another example of a viral infection that can be removed with regular use of Allimax Liquid applied directly to affected area once or twice daily. It may also be used as a shampoo additive to prevent head-lice infestation.
