

PROFESSIONAL STRENGTH

Allimed

Allimed Capsules (60 & 100 ct. bottles)

Allimed contains 100% pure stabilized allicin from fresh garlic.

Allimed provides the body 100% yield of allicin from garlic sourced from Spain. A patented extraction process produces allicin and locks all its benefits into convenient, one-a-day capsules designed for rapid absorption into your body. Allimed Capsules have a 36 month shelf life. Potency by diminish if kept longer.

Allimed's sophisticated refinement allows us to capture garlic's active component, allicin and deliver it directly to where your body needs it. Allimed can be used for a number of conditions with a anti-bacterial, anti-fungal and anti-viral properties. It has shown to treat a number of pathogens including SIBO, IBS, MRSA, Streptococcus aureus bacteria, assist in helping Lyme disease, common cold, flu, and a number of both viral and bacterial infections.

Years have been spent researching and developing Allimed to ensure it delivers maximum strength and maximum benefits. Allicin has shown to improve major health issues such as colds, flu, bacterial infections, viral infections, high blood pressure, cholesterol, and overall an improved immune response.

Allimed is the most potent allicin formula. It also aids the immune system, circulation, digestion and provides detoxification and cleansing abilities. Sufferers of SIBO, IBS and MRSA, will also benefit from the powerful attributes of 100% stabilized allicin found in Allimed.

Ingredients: Allimed capsugel vegetarian size "0" capsules contain 450mg concentrated natural allicin extracted from fresh garlic. Casing is Non-GM maltodextrin. Free from artificial coloring, flavoring, salt, gluten and preservatives. Suitable for vegans and vegetarians. Vegetarian capsule: Maltodextrin, gum acacia and allicin.

Dosage: Up to 18 capsules per day may be taken if needed (6 at a time), and just one capsule a day of Allimed with food can be beneficial for health and well-being. It is easily absorbed. Capsules can also be opened and mixed with food or water.

How To Get The Most From Allimed Capsules

Allimed capsules contain 450mg of stabilized allicin powder derived from garlic, nature's anti-microbial agent. This means that Allimed capsules can be used to help resolve conditions with a bacterial, fungal or viral cause.

Stomach

An upset stomach that causes diarrhea and/or vomiting is usually caused by an E. Coli infection or sometimes Salmonella or Clostridium bacteria may be responsible. Allimed can kill these pathogens very easily. You will need to take a large dose in one go – so up to 6 Allimed capsules in a single dose should be enough to resolve this condition. This dose can be repeated 12 hours later if necessary and then we recommend staying on a maintenance dose of 1 capsule per day.

Circulatory System

You can also use Allimed capsules to help treat blood pressure and cholesterol levels. Take 3 capsules per day for a period of 3 months and review your levels. If you have seen a reduction then reduce the dose down to 1 capsule per day.

Chest Infections

These can be difficult to resolve but as most of the infections are Staph or Strep bacteria these are very sensitive to Allimed treatment. Start with a course of 3 capsules per day – but if the infection is persistent then double this dose for a period of 1-2 months. Once the infection is resolved reduce back to a maintenance dose to prevent a re-infection.

MRSA Infections

Allimed formulations have been shown to kill multi drug resistant bacteria including Staphylococcus aureus. Patients with open infected wounds will need to take Allimed capsules and use both the crème and liquid spray formulations. This combination will help to cleanse the wound and allow the healing process to accelerate. Some patients may have systemic MRSA infections (e.g. bladder, throat, stomach and prostate) and here the capsules will be sufficient in a dose of at least 3 per day for 1-3 months. It is important to keep the patient on a maintenance dose after the infection has been cleared.

Allimed With Other Drugs

You can take Allimed with ANY other pharmaceutical drug including ASAs, Steroids, blood thinners like Coumadin and Clopidogrel. Allimed can often make your existing drug regimen work better as data suggests allicin is synergistic with many pharmaceutical agents especially antibiotics.
